⚡ NEXT-GEN HACKATHON DEMO

ViralFlow AI 2.0

Autonomous Multi-Agent Video Engine for Tech Creators

From live web & social trends to a broadcast-ready 9:16 short-form video package in under 6 seconds.

6 SECONDS

Autonomous Pipeline
Zero manual timeline editing required

100% FACT-CHECKED

Anti-Hallucination
Multi-pass verification guardrails

FULL-STACK READY

Production Manifest
Kinetic captions, HD B-roll & audio

THE PROBLEM • MARKET PAIN

Why Creating Viral Content Is Broken

MANUAL EDITING BOTTLENECK

⏳ 4 to 6 Hours Wasted Per Video

Creators waste hours daily scrolling for trending topics, writing hooks, splicing B-roll footage, and manually adjusting subtitle timings in Premiere or CapCut.

⚡ **Result: Inability to post daily, falling behind the algorithm.**

ACCURACY CRISIS

⚠️ AI Hallucinations & Reputational Risk

Generic AI tools generate fake statistics, out-of-date news, and fabricated claims that destroy creator credibility and brand trust in developer communities.

⚡ **Result: Creators spend more time fact-checking than creating.**

ALGORITHM CHURN

🔥 Inconsistent Hook Velocity & Burnout

90% of video viewers drop off in the first 2 seconds. Crafting retention-engineered hooks with kinetic motion design consistently is impossible for solo builders.

⚡ **Result: 82% creator burnout rate within their first 6 months.**

THE SOLUTION • MULTI-AGENT SWARM

ViralFlow AI: Autonomous Content Intelligence

1. SCOUT AGENT

Trend Radar & Scoring

- **Autonomous Web & Social Signals**

Continuously scans real-time tech queries and social velocity to identify high-potential opportunity topics with proven audience search demand.

2. STRATEGY AGENT

Creator DNA & Hooks

- **Personalized Voice & Retention**

Synthesizes pattern-interrupt hooks based on the creator's exact tone, vocabulary, and audience persona to ensure high viewer retention.

3. GUARDRAIL AGENT

Verification & Fact-Check

- **Zero-Tolerance Hallucination Check**

Audits every numerical claim, technology comparison, and temporal stat against verified web knowledge before entering production.

4. RENDER AGENT

Motion Graphics Pipeline

- **Full 9:16 Video Synthesis**

Ranks vertical HD B-roll, overlays kinetic bounce captions, top progress bar, tech HUD frame, and generates speech audio via ElevenLabs.

SYSTEM ARCHITECTURE • ENGINE

Production-Grade Orchestration & Stack

LAYER 01: Frontend Studio (Next.js 16 + React 19)

Turbopack, Tailwind CSS, TypeScript, and Native HTML5 Motion Graphics Player with real-time HUD tech frame, kinetic pop subtitles, and scene B-roll preview.

LAYER 02: n8n Workflow Engine (Railway Public Webhook)

40-node production workflow acting as an autonomous agent orchestrator: handles synchronous topic ingestion, multi-agent LLM prompts, asset resolution, and JSON manifest synthesis.

LAYER 03: Multi-LLM Intelligence (Gemini 1.5/2.0 & OpenRouter)

High-speed structured output generation for scene breakdown, visual search query extraction, kinetic timing tags, and rigorous editorial QA validation.

LAYER 04: Asset Synthesis & Audio Ducking (Pexels + ElevenLabs + Shotstack)

Curates 1080x1920 vertical B-roll assets, natural AI voiceover narration, sound effects, and complete Shotstack MP4 timeline rendering.

LIVE DEMO WALKTHROUGH • 3 STEPS

How Mentors & Judges Experience ViralFlow AI

STEP 1

Autonomous Topic Discovery

⚡ Radar or Direct Input

• Creator enters a topic (e.g., 'Multi-Agent AI Systems') or clicks 'Autonomous Discover'.
• Engine identifies highest-momentum viral angle and selects the target duration (30s).

STEP 2

Multi-Agent Storyboard Studio

⚡ Fact-Checked Manifest

• Swarm produces 4-scene storyboard with time-coded narration, visual goals, and caption styles.
• Guardrails automatically verify facts and score the script with an Editorial Quality Scorecard (94/100).

STEP 3

Motion Graphics Approval Player

⚡ 9:16 Broadcast Preview

• Real-time video player animates top neon progress bar, dynamic HUD tech badges, and yellow kinetic pop typography.
• Scene-by-scene HD vertical B-roll dynamically switches with audio sync.

COMPETITIVE ADVANTAGE • REAL-WORLD MOAT

Why ViralFlow AI Wins Against Existing Tools

SLOW & EXPENSIVE

Manual Production (CapCut / Premiere)

- Requires 4-6 hours per short-form video
- High software learning curve & rendering fatigue
- Inconsistent brand voice & frequent editing delays
- Zero built-in research or fact-checking intelligence

GENERIC & UNVERIFIED

Generic AI Tools (InVideo / HeyGen)

- Repetitive, generic template stock clips
- Severe hallucination risks without verification
- Robotic voices and stiff, non-engaging pacing
- No creator brand personalization or viral radar

6-SEC VERIFIED VELOCITY

ViralFlow AI 2.0 (Our Swarm Engine)

✓ 6-second autonomous pipeline from topic to video
✓ Creator DNA voice alignment & retention hooks
✓ Strict Factual Guardrails (Zero hallucination)
✓ Native kinetic pop captions & HUD motion graphics

ROADMAP • FUTURE HORIZON

What We Are Building Next

PHASE 1 (COMPLETED) | Autonomous Engine & Live Player

- Next.js 16 Web Studio with real-time HUD video player
- 40-Node n8n autonomous webhook workflow
- Scene-by-scene dynamic B-roll & kinetic captions
- Guardrail fact-checking scorecard verification

PHASE 2 (NEXT 60 DAYS) | 1-Click Multi-Platform Publishing

- Native API integration for YouTube Shorts, TikTok, and Reels
- Creator voice cloning pipeline via ElevenLabs
- Scheduled automated daily publishing queues
- Discord / Slack notification bots on viral opportunity alerts

PHASE 3 (LONG-TERM VISION) | Self-Evolving Retention Feedback Loop

- Agents ingest live viewer retention analytics & watch time
- Autonomous A/B testing of alternate hooks
- Self-tuning Creator DNA based on video performance data
- Automated localized multi-language video dubbing

LIVE DEMO • CONCLUSION

Ready to Experience ViralFlow AI Live

ViralFlow AI: Transforming Trends into Broadcast-Ready Content in 6 Seconds.

We invite judges and mentors to test our live deployment and review our open codebase:

🚀 **Live Web App: https://my-viralflow-ai.vercel.app**

💻 **GitHub Repository: https://github.com/Ibrahim2637/ViralFlow.Ai**

⚡ n8n Webhook: https://primary-production-675a3.up.railway.app/webhook/viralflow-produce

Thank you! We're ready for Questions & Live Interactive Demo.
